

Katie Fite preliminary findings

On July 25 and 26 I observed the South Fork area of the Owyhee River. I observed 4 places horses can access water.

Horses approached the area cautiously and only went a few at a time to drink.

Please note the young foal.

I also noted evidence that horses had been driven down the river bed and held in temporary corrals. Also noted a horse that appears to have been driven onto the rocks.

A complete report including GPS readings of all access points to water noted and documented, all disturbance areas noted and documented is being compiled. It can be available to the court by Thursday am for review.
